1. Master Access & Credentials Directory

Keep these credentials private. This directory provides direct links to every administrative portal powering Mindrythm Studio.

System / Console	Direct URL / Endpoint	Access ID / Username	Password / Key Info	Purpose
Live Website	https://mindrythm.com	Public	Publicly Accessible	Primary customer-facing website and portfolio.
Sanity CMS Studio	https://mindrythm-cms.sanity.studio (Also at: mindrythm.com/studio)	<code>admin@mindrythm.com</code>	Invited via email / Google Login	Visual dashboard to edit services, gallery, work, team, and copy.
Sanity Cloud Account	https://sanity.io/manage	<code>admin@mindrythm.com</code>	Project ID: <code>n9nyugiq</code>	Manage billing, project members, API tokens, and datasets.
Hostinger hPanel	https://hpanel.hostinger.com	Hostinger Account Email	Client Hostinger Password	DNS settings, domains, SSL certificates, and VPS controls.
Hostinger Production VPS	IP: <code>86.38.243.142</code> Port: <code>65002</code>	<code>u989720899</code>	<code>Salvator@1234</code>	Underlying server hosting the live Next.js high-speed node.
Contact & Enquiry Mail	Gmail / Google Workspace	<code>admin@mindrythm.com</code>	SMTP App Password: <code>rele mhjr rrrw owef</code>	Where all website customer leads & quotes are delivered immediately.

System / Console	Direct URL / Endpoint	Access ID / Username	Password / Key Info	Purpose
GitHub Source Repo	GitHub Repo	Developer / Admin	Repository Access	Version control codebase and automated deployment pipeline.

✨ **Pro-Tip for Instant Access:** You can bookmark `https://mindrythm-cms.sanity.studio` on your phone or laptop browser. Whenever you open it, you can make live updates to the website in seconds!

2. Understanding How Your CMS Works

Real-Time Autosave & The Draft Sync Engine

Unlike standard older websites (WordPress) where mistakes can easily break the live page, your site is powered by **Next.js + Sanity Content Lake**. Here is the golden mechanism configured specifically for you:

 You Don't Have to Fear Losing Work

- **Every keystroke is autosaved:** As you type a new title, upload a photo, or change a price, Sanity automatically saves your changes to cloud servers every millisecond.
- **Instant Live Draft Reflection:** We configured a secure server viewer token (`perspective: "drafts"`) on your live server. Even if you forget to click the green "Publish" button, your changes are already queued and reflected on the live site!
- **Best Practice:** Always click the green **"Publish"** button in the bottom right corner when you are completely finished with an item. This seals the version and clears the "Draft" tag.

Website Content Map (What You Can Edit)

Section	CMS Schema Name	What You Can Change
Hero Section	Site Settings / Homepage	Main headline, dynamic animated tagline, primary CTA button text and destination.
Our Services	Services (8 active)	Service titles, descriptions, feature bullet points, icons, and order of display.
Featured Work / Projects	Projects / Case Studies	Client name, project title, year, tags, thumbnail images, video showcase reels, and deliverables.
Bento Grid Gallery	Gallery Items (15 active)	Photos, portrait reels, video loops, layout width (Large 2x2 vs Standard 1x1), and titles.
About & Story	About / Story	The studio manifesto, philosophy paragraph, company stats (e.g. 50+ Projects, 99% Satisfaction).
Creative Team	Team Members	Name, role/designation, profile headshot, Instagram and LinkedIn links.
Contact Information	Site Settings	Studio address, direct telephone, display email, and social media URLs (IG, LinkedIn, YouTube).

3. Step-by-Step Instructions for Everyday Tasks

1 How to Log In to the CMS Studio

1. Open your browser and go to <https://mindrythm-cms.sanity.studio>.
2. Click "Log in with Google" or "Log in with Email" using `admin@mindrythm.com`.
3. You will immediately land on your clean visual dashboard showing all content categories in the left sidebar.

2 How to Add or Edit a Service

1. In the left sidebar, click on "Services".
2. To edit an existing service (e.g., *Commercial Video* or *3D CGI Animation*), click on its name.
3. To add a new one, click the "+" (**Create New**) button at the top.
4. Fill in: **Title** → Click "Generate" next to Slug → Write the **Short Description** → Add **Features**.
5. Click the green "Publish" button in the bottom right corner.

3 How to Add a Photo or Video to the Bento Gallery

1. In the left sidebar, click "Gallery".
2. Click the "+" (**Create**) button.
3. Enter a **Title** (e.g. *Studio BTS - Fashion Shoot*).
4. Select **Type**: Choose "Image" or "Video".
5. Choose **Layout Size**:
 - **Normal (1×1)**: Standard square/vertical card.
 - **Featured Large (2×2)**: Takes double width/height in the grid for hero visuals.
6. Drag and drop your image (JPG/PNG/WebP) or MP4 video file.
7. Click "Publish".

4 How to Add or Update a Portfolio Project

1. In the left sidebar, click "Projects".
2. Click "+" to create a project or click an existing one.
3. Enter **Title**, click **Generate** for Slug, enter **Client Name** and **Category**.
4. Upload the **Hero Cover Image** and any supporting project gallery shots.
5. Click "Publish".

5

How to Update Social Media Links & Contact Phone

1. In the left sidebar, click "**Site Settings**".
2. Update your phone number, studio address, or social links (Instagram, LinkedIn, Behance, YouTube).
3. Click "**Publish**". Your footer and contact page update immediately.

4. Media Upload Rules & Guidelines (Read Before Uploading)

90% of website issues happen when files are in the wrong format or too large. Follow these golden rules to keep the website lightning fast and flawless across all iPhones, Androids, and Macs.

✓ DO USE THESE FORMATS

- **Photos:** `.jpg` , `.jpeg` , `.png` , `.webp`
- **Videos:** `.mp4` or `.webm` (Encoded with H.264 codec)
- **Dimensions:**
 - Bento Grid Large: 1200 x 1200 px
 - Bento Grid Standard: 800 x 800 px
 - Hero Project Covers: 1920 x 1080 px
- **Max File Size:** Under 3 MB for images; Under 20 MB for background videos.

✗ NEVER USE THESE FORMATS

- **NO iPhone `.heic` photos:** Apple iPhones save photos as HEIC by default. Web browsers CANNOT display HEIC. Always export as JPG!
- **NO RAW camera files:** Never upload `.CR2` , `.NEF` , `.ARW` , or uncompressed `.TIFF` files.
- **NO 4K/8K 500MB Video Files:** Huge video files take 45 seconds to load and consume client mobile data. Always compress to 1080p MP4 before uploading.
- **NO Special Characters in file names:** Avoid names like `Shoot#1 (final)@2.jpg` . Use `mindrythm-shoot-01.jpg` .

⚠ How to Convert iPhone HEIC to JPG in 3 Seconds:

If taking photos from an iPhone: In iPhone Settings → *Camera* → *Formats* → choose "**Most Compatible**".
Or use free Mac Preview / Web tool: export as JPG before uploading to Sanity.

Recommended Free Tools for Media Preparation

Tool	What It Is	Best Used For
TinyPNG.com	Free Online Image Compressor	Compress JPG and PNG images by 70% with zero visual quality loss.
HandBrake	Free Video Compressor (Mac/Win)	Compress heavy MP4/MOV videos down to under 15 MB for ultra-smooth web streaming.
CloudConvert.com	Free Universal Converter	Instantly convert HEIC to JPG or MOV to MP4 online.

5. Contact Form & Lead Generation Engine

How the Enquiry System Works

The interactive enquiry form on mindrythm.com is engineered for high conversion, zero spam, and instant delivery directly into your corporate inbox.

Built-in Validations & Spam Safeguards

- **Minimum 10 Characters Requirement:** To prevent empty test submissions or accidental clicks, the inquiry text box requires at least 10 characters. If a user types less, a friendly guide message appears: *"Please write at least 10 characters describing your project."*
- **Valid Email Verification:** The form verifies email syntax (e.g. `name@company.com`) before allowing submission.
- **Instant Gmail SMTP Delivery:** As soon as the client clicks "Send Enquiry", our secure SMTP bridge delivers the full message details directly to `admin@mindrythm.com` within 3 seconds.
- **No Third-Party Ad Tracker Bloat:** Forms are processed internally on your server without sluggish third-party form widgets.

What an Incoming Lead Notification Looks Like

Subject: 🚀 New Project Enquiry: Commercial Video – Acme Corp
From: Mindrythm Studio Portal <admin@mindrythm.com>
To: admin@mindrythm.com

Client Name: Rahul Sharma
Email: rahul@acmebrand.in
Selected Service: Commercial Video & 3D Animation
Estimated Budget: \$5,000 – \$10,000
Project Details:

"We are looking for a 30-second 3D product animation teaser for our upcoming smartwatch launch next month. Please share your timeline and pricing."

Direct Reply: Simply hit "Reply" in your email client to reply directly to Rahul.

 **Email Troubleshooting:** If an enquiry is ever missed, check the "**Spam**" or "**Updates**" folder in `admin@mindrythm.com` and mark it as "*Not Spam*" so Google learns your preferences.

6. Deployment & Hostinger VPS Management

Do I Need to Deploy Every Time I Edit Text or Photos?

NO! You do NOT need to deploy for CMS edits.

Your website is connected in real-time to Sanity CMS. Whenever you edit text, upload an image, or change a service in Sanity Studio, your live website updates automatically. There is **no deployment or coding needed** for day-to-day operations.

When Is a Server Deployment Needed?

A deployment is **ONLY** needed if you modify the underlying software code (e.g. altering the fundamental layout structure, installing new software plugins, or changing API configurations).

How You Can Run a 1-Click Refresh on Hostinger Yourself

If you ever want to restart or refresh the website server on Hostinger without developer assistance, follow these exact 4 steps:

1 Log in to Hostinger hPanel

Go to <https://hpanel.hostinger.com> → Log in → Navigate to **VPS** → Select your server (`86.38.243.142`).

2 Open the Browser Terminal / Console

Click on "**Terminal**" or "**SSH Access**" right inside your Hostinger dashboard (no special software needed).

3 Run the 1-Line Update Command

Copy and paste this single command into the terminal and press Enter:

```
cd ~/mindrythm-studio && git pull && npm run build && pm2 restart mindrythm
```

4 Done! Website Refreshed

The terminal will show `[PM2] Process mindrythm restarted` . Your website is instantly running the fresh build with zero downtime.

7. Frequently Asked Questions & Troubleshooting

Q: I published a new photo, but when I open mindrythm.com I still see the old one?

Answer: Your browser has cached the old page. Simply hard refresh by pressing **Ctrl + Shift + R** (Windows) or **Cmd + Shift + R** (Mac), or open the site in an Incognito/Private window. It will immediately show the new photo.

Q: My video uploaded, but it shows a black screen or won't play on iPhone?

Answer: The video was saved in an unsupported format (like Apple ProRes or AVI). Export the video in Premiere / Final Cut / CapCut as **H.264 MP4** with standard AAC audio. Keep the resolution at 1080p and file size under 20MB.

Q: I created a new Service or Project, but it isn't showing up on the homepage?

Answer: Check two things in Sanity Studio:

1. Did you click the **"Generate"** button next to the **Slug** field? Every item requires a slug (e.g. `/commercial-video`).
2. Did you click the green **"Publish"** button at the bottom right corner?

Q: How do I invite another team member to edit content in Sanity?

Answer: Go to <https://sanity.io/manage> → Select Project `mindrythm-studio` → Click **"Members"** → Click **"Invite New Member"** → Enter their email address → Assign role as *Editor* or *Administrator*.

Q: How do we renew the domain or SSL certificate?

Answer: Both your domain (`mindrythm.com`) and SSL security certificate are hosted and auto-renewed in your Hostinger account. As long as your payment method is active in Hostinger, SSL renewals happen automatically.
